## Globeleq Intern 2020

### FAST FACTS

- Plant: De Aar Solar Power
- Home town: Cape Town
- Passionate about: Electrical Engineering
- Studying: N.D in Electrical Engineering.

What has your first few weeks of work at been like?  
It has taken some getting used to, but the DASP staff make me feel at home. I'm learning new things everyday here on site as we encounter different kinds of challenges.

What are your goals for 2020?

My goal is to fulfill the highest and truest expression of myself and of course execute my in-service training by obtaining degree.

Why do you think solar power is important to bridge South Africa's current energy shortfall?

Solar power is a pillar for such an issue and the source of energy is freely available. I believe if given enough funding and more use in the energy mixture of the country, it could be the answer to an endless supply of energy for our country.

"The highlight of the Induction Programme was the visit to Klipheuwel Wind Farm. It was my first at a plant and a substation. It gave me a picture of the kind of environment that I would be working in. I became friends with most of the other interns - we communicate most days, even outside work."

Who is your greatest champion?

My mother and my aunt are my greatest champions, supporters and inspiration.

My mother helps me with my personal life challenges by giving me advice when I need it.

My aunt also helps me with personal life battles, but she mostly helps me with matters related to my career by giving me advice and intervening when necessary.

My goals for 2020:

- To meet my in-service training requirements so that I can graduate next year.
- To fulfill my Job description requirements.
- To gain work experience.
- To obtain a driver's license.
- To find permanent work at the end of my internship.
