

Olwethu Jacobs

Globeleq Intern 2020

FAST FACTS

- Plant: Droogfontein Solar Power
- Home town: Colesberg, Northern Cape
- Inspired by: evolving technology
- Studying: N.D in Electrical Engineering.

What has your first few weeks of work at been like?
My Work Integrated Learning has been great, especially with the DFSP team's warm welcome. They have been eager to teach me about the plant operations.

What are your goals for 2020?

My goal is to fulfill the highest and truest expression of myself and of course execute my in-service training by obtaining degree.

Why do you think solar power is important in South Africa and this current point in our country's energy supply?

Solar power helps to ease this pressure on the grid by using the abundant resource that the sun offers.

"The highlight of my Globeleq induction programme was definitely the site visit to Klipheuwel Wind Farm! I was so thrilled to see those beautiful wind turbines.

During my induction I became friends with all my fellow-interns and enjoyed spending time with them. "

Who has been your greatest champion?

My mother is my greatest champion and she has always supported my goals. I'm highly inspired by how she continues to become a better version of herself, and how she's strives for success regardless of what she has already achieved. She puts her blood, sweat and tears into attaining her dreams. I'm inspired to do the same for myself.
